

A coastal flood is caused by a coastal process like waves, tide, storm surge, and heavy rainfall

To be prepared, have a meeting spot when there is a flood.

The floodwater is the most dangerous thing during a flood, it can cause so much damage .

River flooding is where rainwater or melted snow goes in a river and the water flows over the banks.

A flash flood is caused by heavy rainfall or rapid snow melt. They can occur within a few minutes.

To stay safe in a flood go to high ground.

During the flood turn off all electronics.

FLOODING

The illustration shows a flooded residential area. In the foreground, there is a blue body of water representing floodwater. Behind the water is a brown wooden fence. Three houses are visible: a green house with a blue roof on the left, a green house with a red roof and a large arched window in the center, and a white house with a black roof on the right. The word 'FLOODING' is written in large, bold, black capital letters across the middle of the scene, partially overlapping the fence and the houses.
