

LET'S TALK ABOUT TORNADOS

An infographic by: Silas, Ethan, Drew, and Gavyn

HOW THESE ARE FORMED!

They are formed when cold and hot air streams collide mid air and mix, this combination creates one of these dangerous twisters!

SUPPLIES YOU WILL NEED!

To survive in a twister you will need supplies like food, water, lanterns, radio, phone, and a safe location.

- Without some of these materials you will not be able to survive for a long period of time during a twister.

TYPES OF A TORNADO

There are five types of tornados, some strong, and some weak. The least dangerous tornado is an F1 and the most dangerous is an F5. In rare occurrences even an F6!

TORNADOS MOSTLY OCCUR DURING THE SUMMER MONTHS.

- Tornadoes can accompany tropical storms and hurricanes once on land.
- Damage paths of tornadoes can be in excess of one mile wide and 50 miles long.

TORNADO AVERAGE NUMBERS

The average number of tornados in Nebraska is 57 but in the U.S. it is about 1,000 per year.
